

// **NEW: with 5-fold automatic lock as standard**

# Aluminium Entrance Doors

Enjoy Comfort and Security for Your Home

## Hörmann entrance doors for your home

Your new entrance door should be very special. It should match the style of your home and be prestigious, expressing your excellent taste. At the same time, your entrance door should also meet high security standards and help save energy with high thermal insulation values.

## Aluminium doors are a good choice

You will soon notice that aluminium doors are superior to plastic and wooden doors in many ways. Other than the many technical equipment and design options, you can enjoy a number of additional advantages:

- high acoustic rating
- high thermal insulation
- high security
- high stability
- no follow-up painting necessary, the doors look as good as new after many years of service.

In addition, Hörmann offers you alternative entrance door programmes:

## ThermoPro doors

The beautifully designed Hörmann ThermoPro doors made of aluminium and steel offer you high security and good thermal insulation at an affordable price.

For more information on aluminium entrance doors and other Hörmann quality products, visit: [www.hoermann.com](http://www.hoermann.com).

The colours shown are subject to the limitations of the printing process and cannot be regarded as binding.

All rights reserved. Reprinting, even in excerpts, requires our express approval. Subject to changes.

## Enjoy quality from a single source – without compromises

## Made in Germany

All entrance door components are developed and produced in-house at Hörmann. Our highly qualified employees permanently work on new products, continuous developments and improved details. The results are patents and one-of-a-kind products you can depend on. Endurance tests under real conditions ensure mature series products in Hörmann quality.

## Certified brand quality

### CE mark according to EN 14351-1

The CE mark confirms compliance with and observance of the principal requirements of the EC directives according to EN 14351-1 for all of our entrance doors.

### Quality assurance system according to DIN ISO 9001

Hörmann's entrance door production is DIN ISO 9001 certified. One more example of the Hörmann Motto: "Quality without compromise".

## Long-lasting. Guaranteed.

We are convinced of our products and our uncompromised quality assurance. That is why we issue a 5-year guarantee\* on all Hörmann entrance doors.

\* Extensive guarantee conditions are available at [www.hoermann.com](http://www.hoermann.com)

## TopComfort

### The inexpensive basic version

TopComfort doors offer you equal degrees of design and functionality – the all round profiles are precisely connected and mitred at the edges, creating a harmonic frame around the styled infill, which is precisely framed by the leaf profile (1). The view of the interior shows the door infill with rounded beads and the trim with a discreet grey seal (2).

### Good thermal insulation

The 80 mm thick profile system with thermal break and the 30 mm thick infill ensure good thermal insulation. Depending on the style, we offer you TopComfort entrance doors with a k-value of up to  $1.4 \text{ W/m}^2 \text{ K}$ . This allows you to save heating costs and enjoy a comfortable atmosphere at home.

### Double thermal insulation glazing

Even with entrance door styles featuring large glazed areas you do not have to fear excessive energy loss. This is because the thermal insulation glazing offers you a compelling k value of up to  $1.1 \text{ W/m}^2 \text{ K}$ .

### Optimally adjusted

The beautifully designed three-way hinges allow the TopComfort entrance door to be variably adjusted. This way, your entrance door is optimally sealed and falls smoothly and securely into its lock.

TopComfort three-way adjustable hinges

Exterior view

Viewed from the inside

## TopPrestige

### The elegant overlapping-leaf version

In the TopPrestige version, the infill design is mounted onto the leaf profile, thus appearing generous and elegant when viewed from the outside (1). Inside, it has a pleasing slim leaf profile without strips and without a visible seal (2).

### High thermal insulation

The glued composite structure of leaf and style infill of the TopPrestige versions offers you an entrance door with very high thermal insulation. Its thermal break profile system and the PU-foamed infill ensure that barely any heat escapes to the outside. Depending on the style, we offer you TopPrestige entrance doors with a k-value of up to  $1.3 \text{ W/m}^2 \text{ K}$ .

### Double thermal insulation glazing

For TopPrestige entrance doors with large glazing areas you receive a version with top thermal insulation values. They give you the benefit of thermal insulation glazing as standard with a k-value of up to  $1.1 \text{ W/m}^2 \text{ K}$ .

### Created for comfort

The beautifully designed three-way hinges allow the TopPrestige entrance door to be variably adjusted. You can always rely on your entrance door being optimally sealed and falling smoothly and securely into its lock.

TopPrestige with three-way adjustable hinges

**The Premium entrance door: Highest degree of thermal insulation and design**

## TopPrestigePlus

### Added thermal insulation and design

With the TopPrestigePlus entrance doors, you can enjoy the highest degrees of comfort. This is because TopPrestigePlus versions are distinguished on the outside (1) and the inside (2) by infills overlapping the leaf. The flush-fitting interior view of the door harmoniously matches the doors of your home.

### Use the thermal insulation that sets benchmarks

TopPrestigePlus entrance doors feature an 80 mm thick profile system with thermal break and a 70 mm thick insulated styled infill. With thermal insulation values of up to  $1.0 \text{ W/m}^2 \text{ K}$ , they are especially suited for fitting into low-energy houses as well as houses with energy consumption values of KfW 40 to KfW 60.

### For your additional comfort: triple thermal insulation glazing

Enjoy the triple glazing with a k-value of up to  $0.7 \text{ W/m}^2 \text{ K}$ . The resulting minimum thermal loss translates into true energy and financial savings for you.

### Functional elegance: Guide rollers

Our standard guide rollers offer you optimal comfort with an understated functional look. Their design guarantees simple and convenient adjustment of the door leaf, allowing you to comfortably and securely close your new entrance door at any time.

## The look: fascinating

### Rounded fascia frame, optional for all entrance door styles

For a particularly balanced look, we optionally offer you all entrance door styles with a rounded fascia frame as an additional outdoor design element. This stylishly enhances your entrance door, giving it a particularly harmonious look with rounded edges. Fascia frames are delivered as standard with Golden Oak versions.

For a harmonious look and a design element at the same time – included as standard for all entrance doors with Golden Oak surface.

The additional fascia frame extends the depth of the frame profile to 97 mm.

**"A good reputation must be earned."**

August Hörmann, company founder, 1886–1944

## Discover your new entrance door

And a programme that has much to offer

Choose according to your own wishes from 3 different versions to receive an individual look and thermal insulation: The inexpensive basic version TopComfort, the elegant leaf-overlapping version TopPrestige, or the TopPrestigePlus version with additional thermal insulation and design. No matter which version you choose – you will always receive top quality "Made in Germany".

**The exclusive Hörmann colour shade CH 703**

This colour with a structured surface in anthracite has a noble look. The Hörmann colour CH 703 is distinguished by its contemporary understated style. It provides a very special touch that is suited for special architectural styles.

# At the focus of your attention

Matching entrance doors and garage doors

We think like you in terms of design. This is why we offer you the elegant lines of the ribbed look – a Hörmann garage door classic for many decades – also matched to the design of the Hörmann entrance doors. A visual accent that effectively highlights the stylish overall appearance of your home.

**3 entrance door styles matching the Hörmann sectional garage doors with M and L-ribbing.**

**Discover single-concept design**

The large, optimally matched Hörmann programme offers you ribbing for the garage and entrance door of your home in a harmonious single-concept style, i.e. based on a basic line without a visual offset. You will notice that it is these small but crucial details that reflect the beauty of your home.

**TopPrestige entrance doors:**

## Quick and clean within a single day

Professional and competent entrance door modernisation

The modernisation of your new entrance door is easier than you would expect. This is because your Hörmann partner offers you all-round competent service. Starting from consultation via measurement up to the fitting, including the disposal of the old door. Faster than you would expect, your home receives a new look. A decision that is sure to please you for a long time.

**Out with the old door,  
in with the new:  
fast and clean on the  
same day.**

The renovation of an entrance door is a routine task for Hörmann professionals, which they can handle quickly and clean on a single day. The measurement at your home and the selection of the new door is soon followed by the modernisation process. Step 1: Your old door is professionally and cleanly dismantled and disposed of in an environmentally-friendly manner.

Step 2: The new Hörmann entrance door is fitted by the authorised Hörmann partner according to the measurements. The special entrance door threshold neatly covers up the transition from the interior to the exterior. The doors are fixed to the ground by concealed screws.

Step 3: The Hörmann fitter precisely adjusts the entrance door during the fitting, ensuring that your door will give you pleasure for a long time. This guarantees the optimal functioning of the Hörmann entrance door right from the start.

## More light, more style

Express your taste with this style's attractive sand-blasted fluted glass design. You will also enjoy more light in your home.

## This is security you can count on

Our entrance doors offer you 6-fold high protection

When it comes to security, you can also rely on the high quality of Hörmann doors – the H-5-Automatic special security pivoting bolt lock included as standard provides your home with quality-tested protection. When locking, 3 steel bolts with 2 additional hooks pivot into the stainless steel lock plates. In addition, a stainless steel bolt on the hinge side engages with the fascia frame. This way, you can feel perfectly secure with the effective 6-point locking system.

## // NEW: Standard 5-point automatic lock

When locking, 3 steel hooks with 2 additional bolts (on top and on bottom) pivot into the stainless steel lock plates to automatically lock the door. If required, this function can be disabled for the use of the optional electric opener.

**Variably adjustable:**  
**Electric opener** (optional)  
The electric door opener catch in the lock plate ensures that your guests can only enter your home if you push the electric door opener inside. Alternately, during daytime you can also toggle the locking lever so that the entrance door can be opened by a slight push from the outside.

**Solid security bolt**  
A stainless steel bolt engages during locking with the fascia frame. This way, it protects the door on the hinge side from being excavated or pushed in.

## Standard equipment

**Beautifully designed interior lever**  
Standard in stove-enamelled white or optionally in stainless steel or RAL to choose.

**Beautifully shaped security rose escutcheon**  
This additionally protects the profile cylinder from being drilled open and twisted off. Available in white RAL 9016 as standard and in stainless steel for Golden Oak and anthracite surfaces.

**Threshold with thermal break**  
Extremely robust, 80 mm thick and offering thermal insulation – the entrance door threshold with thermal break and concealed bolting to the bottom. In EV1 silver coloured.

**HINT:** The S-5-Automatic/comfort locks are VDS (German Property Insurance Association)-tested and certified. This means that the self-locking doors are considered locked in case of a break-in, maintaining your claims towards your property insurance.

## Securing excellent properties!

Highest protection matched with convenient operation

Always, good to know – beyond the standard security equipment of Hörmann entrance doors, you can equip your door with intelligent technology for more comfort and security. Hörmann offers you for this the latest options. Your Hörmann partner will offer you consultation and information on this topic.

For all Comfort versions you can continue to unlock your entrance door with its key.

### Graduated higher security

Hörmann offers you various security packages offering graduated additional security and comfort.

#### Secure opening with an integrated steel bar:

The **S-3 S** security package features a steel bar integrated in the lock. This allows you to initially open the door only a crack, preventing strangers from pushing it open all the way. This security package is also available with an automatic lock (**S-5 S Automatik**) which automatically locks your entrance door when it is pulled shut. The automatic lock is also available without a steel bar (**S-5 Automatik**).

#### Automatic locking – comfortable opening:

The **S-5 Comfort** security packages feature an automatic lock that locks the door automatically when pulled shut. When opening via one of the control element options (internal push button, hand transmitter, etc.) an integrated motor releases the lock and the door can be easily opened. Of course you can continue to unlock your entrance door with its key.

#### Push button opening

With **S-5 Comfort**, your entrance door can be opened at the push of a button from the inside, e.g. via the house intercom. This is especially suited for multi-party residences.

#### Via finger print: (see image on left):

**S-5 Comfort Scan** opens your door with a finger scanner. You and your family no longer need keys. Incidentally, you can also equip your Hörmann garage door with this technology.

#### With transponder technology:

With **S-5 Comfort Plus**, you can additionally open your door very conveniently from the outside via transponder technology, i.e. with an electronic key without having to touch the door.

# The Vario programme

Tailored to your wishes

The Hörmann Vario programme has almost no limits. You can choose from a large range of options and decide individually what your entrance area should look like. You decide on the colour of your Hörmann entrance door, its handle and its glazing. Your Hörmann specialised dealer will gladly provide you with delivery times and prices.

**Individual choice of colours or timber design**

In addition to our standard colour RAL 9016 white, you can also receive all other RAL colours according to your wishes.

**402 TP** in sepia brown RAL 8014.

**667 TP** in window grey RAL 7040.

**694 TP** in moss green RAL 6005.

**40 TP** in wine red RAL 3005.

**185 TP** in grey olive RAL 6006.

**45 TP** in black brown RAL 8022.

**A handle on everything – with a design according to your wishes**

In this catalogue we have already chosen from the multitude of possibilities a matching handle for the style of each entrance door shown. Yet this is only a suggestion. You can select your personal favourite from our programme according to your wishes and conceptions. Because your taste is what matters. Following is an overview of all available handles. (Delivery times and prices may vary). Your specialised Hörmann dealer will provide you with prices and delivery times.
